

CONTROL SMALL FLIES WITH **TRUETECH™** AND NISUS PRODUCTS.

Create an effective Small Fly Program for your company.

Combine key Nisus products with one of our new TrueTech™ sprayer-foamer-mister machines, and you'll have an unbeatable tool for combating small flies and other pests.

There are a number of pests that might inhabit drains, including drain flies, fruit flies and cockroaches. Drain treatments with Nibor-D used on a regular basis will control and prevent insect pest build-up in the area. Using a solution of ProFoam® Platinum with Nibor-D® in a TrueTech foamer, direct the machine's application tip into the drain and begin foaming to coat the surface areas of the drain and leave a residual that will kill pests feeding on the scum layer or that use the area for harborage.

Nisus DSV™ may also be added for quick kill of drain flies. When foamed into slow or clogged drains, Bac-Azap® will consume the organic materials blocking the drain.
