

BORA-CARE[®] THE DRYWOOD termite solution

TREAT THE WOOD

Drywood termites tend to infest homes by gaining entry around doors, windows, soffits and attics. Once a nest matures, these termites may “swarm” every year and establish new colonies in other areas of the structure. By treating the wood, you kill existing colonies and help prevent future colonies from establishing.

APPLICATION

Bora-Care is sprayed onto all exposed wood in attics, garages, soffits and crawl spaces. Wall voids are injected using high pressure misting or foaming. The Bora-Care methods and technologies ensure that structural wood is protected.

GREEN ADVANTAGES

Your family can remain at home during a Bora-Care application. Bora-Care does not emit VOCs (“Volatile Organic Compounds”), and has an extremely low mammalian toxicity. In fact, Bora-Care has been recognized for its “green” qualities by *Green Builder*[®] magazine, which selected Bora-Care for its inaugural Overall Grand Prize, Best of Show award at the 2006 National Green Building Show in Albuquerque, New Mexico.

During a remedial treatment, Bora-Care can be used with a foaming agent such as ProFoam[®] Platinum to penetrate hard-to-reach areas like window frames.

Single Family Homes – Remedial Treatment

RESIDUAL PROTECTION

Bora-Care treatments kill existing drywood termites and provide residual protection.

Any homeowner who has had to deal with drywood termites knows how hard it can be. Whether you use spot treatments or fumigate the structure, lack of residual protection has always been a problem. Many times homes need to be treated multiple times over the life of the structure.

While these procedures will kill the termites, they do not prevent them from coming back—even in the same year. And in the areas with heavy drywood termite pressure, it is not a question of *if* the home will become reinfested, but *when*. As a result, more and more families are looking for additional treatment choices when dealing with potential drywood termite problems.

ANOTHER SOLUTION

Now you have another option—have your pest control company perform a Structural Drywood Treatment with Bora-Care.

Bora-Care is an EPA-registered termiticide and fungicide that is sprayed onto wood. The active ingredient in Bora-Care is Disodium Octaborate Tetrahydrate, a non-corrosive

borate mineral salt that is deadly to insects. And because it is a mineral salt, it will not break down over time. When Bora-Care is sprayed on the wood, its patented formula penetrates into the wood and remains there, providing years of long-term residual protection.

An added colorant demonstrates Bora-Care's penetration into wood.

REASONS TEN

to use Bora-Care drywood termite treatments.

- 1 BORA-CARE IS A RESIDUAL SOLUTION.** When Bora-Care is applied to wood, it delivers years of long-term residual protection against invading drywood termites.
- 2 IT'S CONVENIENT.** Bora-Care treatments can be done while you remain at home.
- 3 BORA-CARE TREATMENTS ARE NON-INVASIVE** because the product is applied to the wood; other parts of the structure are not impacted as they can be with other treatment methods.
 - Topically applied to surface.
 - Injected into active galleries and damaged areas.
 - Misted or foamed into wall voids.
- 4 VOCs ARE NOT A PROBLEM.** Bora-Care does not emit any Volatile Organic Compounds.
- 5 LESS RISK.** Bora-Care is applied using simple procedures that minimize risk.
- 6 TREATMENT CAN BE DONE AT YOUR CONVENIENCE.** Just like painting, the crew can move from room to room until the project is complete.
- 7 THERE IS LESS POTENTIAL FOR PROPERTY DAMAGE** that may be associated with other treatment methods.
- 8 INHIBITS WOOD DECAY.** Bora-Care will also stop existing wood decay and will prevent decay from starting.
- 9 GENERAL PEST PROTECTION.** Wood treated with Bora-Care also provides an added protection against general pests such as cockroaches.
- 10 SAVES MONEY.** While the cost of doing a Bora-Care treatment may be comparable to other methods, the savings on temporary housing and inconvenience for your family will give you an overall lower cost, fewer headaches and long-term residual protection.
