

DSV: WHEN TO USE

- Use in all areas to disinfect and sanitize. Also use to create a work environment that helps protect employees from Hantavirus, avian flu and other gross soils.

DSV: DESCRIPTION

- Nisus DSV is a disinfectant, sanitizer and virucide that is specially formulated as a concentrate for the pest management industry.
- It was first created to help pest management professionals prevent contamination of structures after Hurricane Katrina caused massive flooding in New Orleans, LA.

It has since been used by PMPs to treat schools to help prevent flu outbreaks and to disinfect fecal and urine areas of high rodent activity in attics and commercial buildings. DSV continues to be used successfully in storm and flood disasters.

DSV has a very extensive and broad label to cover a number of PMP problems.

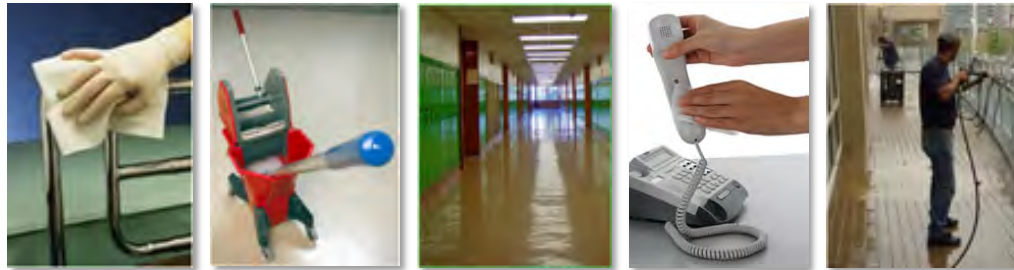

DSV: LISTED PESTS

- **Viruses, bacteria & fungi**
- Human Coronavirus
- Hantavirus
- Avian influenza
- Hepatitis B and C
- Influenza A (H1N1)
- HIV
- Salmonella
- Many others

DSV: APPLICATION INSTRUCTIONS

- Dilute at about 2 ounces per one gallon of water and apply to surface areas to be left at least 10 minutes, then the material can be left to dry or wiped off per label directions.
