

BORA-CARE[®] with MOLD-CARE[®]

Bora-Care with Mold-Care is a co-pack of products formulated to protect wood from threats before and after construction. Mold-Care kills existing mold while Bora-Care helps prevent future damage from drywood termites, carpenter ants, decay fungi, and other wood-destroying organisms. The combination of products is used during new construction to treat all the wood in a structure when there is the presence of mold or when conditions are conducive for mold growth. It is also used to kill mold and help prevent mold growth after flooding or heavy rain events in existing construction. **Wood is the most expensive component in a home. Make it last.**

Bora-Care with Mold-Care is used to protect wood in new and existing construction, including:

- in basements and crawl spaces
- after flooding events
- for the remediation of mold
- for the prevention of fungi
- when structures experience moisture or rain events during construction
